EDUCATION

2017-2019
PETRU MAIOR UNIVERSITY

• TCM

2013-2017
LICEUL TEHNOLOGIC LUDUS

• Bacalaureat

SKILLS

- Php (Laravel)
- JavaScript (React & Vue)
- NodeJs (Express)
- MySql
- Git
- Docker
- Postman
- Tailwind & Bootstrap

PROFILE

Greetings! Meet Claudiu Sonica, a dedicated Mid-Level Full Stack Developer, using magic to create robust and captivating web environments. Over time, I have honed my skills, overcoming numerous challenges that have shaped my journey of knowledge and growth. 🚀

WORK EXPERIENCE

Hyphen (Freelancer)   2024-04 - PRESENT

Full Stack Developer (Laravel + MySql + Blade)

My work primarily revolves around improving and expanding existing Content Management Systems (CMS) by building new features and enhancing existing ones. I have successfully developed and integrated complex functionalities, such as:

 • Kanban Board Module Enhancements: I implemented a label system akin to Trello, enabling task categorization and management. I also added features for associating similar tasks, creating progress-tracking checklists, and setting up notifications for task updates to keep users informed.
 • Role Management System: I developed a comprehensive role management interface that allows administrators to create, edit, or delete roles, assigning different permissions as necessary.
 • Advanced Reporting Tools: I created a reporting page that generates downloadable Excel reports, tracking tasks across boards with filtering options based on users, labels, dates, and tasks. This feature also includes visual data representation using Echarts.
 • Full-Scale Blog Platform: I built a complete blogging site with an administrative dashboard for managing posts. This includes multilingual post creation, GPT integration for content generation and translation, and a comment system for user engagement.
 • Code Refactoring and Optimization: In a previous project, I refactored legacy Laravel code to adhere to the latest industry standards. I optimized the database schema and queries, ensuring efficient data storage and manipulation.
 • CMS Features for a Pest Control Company: In my most recent project, I developed a feature-rich dashboard for a pest control company's CMS. This includes detailed pages for managing devices, poisons, and visits, complete with GPS tracking and an interactive map. Additionally, I built an API that connects the dashboard with a tablet application, facilitating real-time data management of devices acting as traps.

WORK EXPERIENCE

Materom   2024-01 - 2024-04

Junior Full Stack Developer (Laravel + Vue + MySql)

While I worked at Materom I had the opportunity to learn about backend development, database management and more than that working in a team.

- On the backend part, I was assigned to create different API's that connects the server to the client, also apart from that I also worked on the database, to query the data fast and efficiently in a proficient matter.
- Also for this company I worked on the frontend using VueJs as a framework.
- On the client side I used the data from the server to create nice and simple user interfaces with different types of application.

Ddroidd   2023-10 - 2023-12

Front end Developer (React)

While I worked at Ddroidd I had the opportunity to work with a great team and amazing mentors. Beside the development part of my experience I had the chance to also gain some knowledge about team work and project management using the AGILE system. My part of the job was mainly focused around the administrative side of the project and integration of the API. I created the UI for a form which can create edit and manage questions and also another form for quizzes. It's been a great working experience and I learned a lot of new skills.

Asociația Oportunități și Cariere   2023-04 - 2024-04

Front end Developer (Vanilla JavaScript + React

While working as a volunteer, for me, that was the building block of my experience. Here I learned the most about working on a team, the use of version control system (git) and project management environment (GitHub).
On the code writing side of my experience, here I got the opportunity to create some html forms to generate job posts that were used to display the job offers on the jobs search engine page (that was the project about).
I also created some template pages based on the Figma designs.
